

Protect your child with the COVID-19 vaccine and booster

If your child is 5 years or older, **schedule their COVID-19 vaccine now.**

- Text your ZIP code to 438829 (or call 1-800-232-0233).
- COVID-19 vaccines and boosters are free.

Why?

Your child can get COVID-19, even if they are healthy. If your child gets the COVID-19 vaccine, they:

- have less chance of getting COVID-19.
- can stay safe in school.
- have less chance of hospitalization or dying if they get COVID-19.
- cannot spread COVID-19 as easily, especially to grandparents and people with health problems.

COVID-19 vaccines are safe.

- The U.S. has studied COVID-19 vaccines more than any vaccine in history.
- Children **cannot** get COVID-19 from the vaccine.
- Small children get a smaller dose of the vaccine. (Teenagers get the same dose as adults.)

After the COVID-19 vaccine, your child:

- might feel fine, with no side effects.
- might have a sore arm, a fever, or feel tired.
- should feel better after a few days.

Call your doctor if you have questions or are worried about your child.
